PASSION 4 ACTION

since 1928
ENGLAND

The all new 150 acres RSL Shuttlecock Feather Processing Plant (about 56 football fields) is the biggest RSL factory ever.This is the newest addition to RSL factories and it deals only with feather processing.It is currently processing over 2.7 tons of raw feather per day and close to 80 tons per month which amounts to 70 million pieces of feather. RSL sees feather as the most important part of a shuttlecock as it determines the shuttles' durability, flight and speed, which is why we want to control the quality at its source in raw feather form. This means we always have an abundant supply of consistently top quality feather all year round.

In line with making satisfactory progress in business, RSL also helps to promote badminton as a sport by sponsoring international tournaments and players particularly by way of special assistance to help those countries which are still in the course of development programmes. All these efforts are made with a view in promoting badminton as a sport. It is believed that the professionalism of our equipment and exposure of our products will enable more badminton supporter to gain access to these benefits.

DIAMOND SERIES

NEW DIAMOND X7

We have packed so many technologies into our Diamond X5 racket, how can we add more!? In the X7 we manage to add 50 new features making this the most technologically advanced badminton racket we have ever built!

NEW

OVAL TAPER SHAFT TECHNOLOGY

Oval Taper Shaft

The idea was to create a completely new shaft, the most accurate, the most powerful and the fastest shaft ever. We restudied our Taper Shaft and completely redesigned it to create the OVAL TAPER SHAFT.

After extensive research, we found that Oval shape only flex in 1 direction giving it a straighter flex path. If we combine the Oval shape and our Taper Shaft together, this will create more powerful and extremely accurate shots. All the powers are directed in 1 direction making the shot more powerful and because it returns in the same path, racket will have a much quicker reflex back to its natural position ready for the next shot.

The idea was simple but the difficulty was in the HOW. We have tested many many shapes and prototypes and we finally selected Shaft 33B.

- Allowing only one dimensional flex path
- Faster, more accurate, more control, more power
- Taper Shaft gives extra flex power

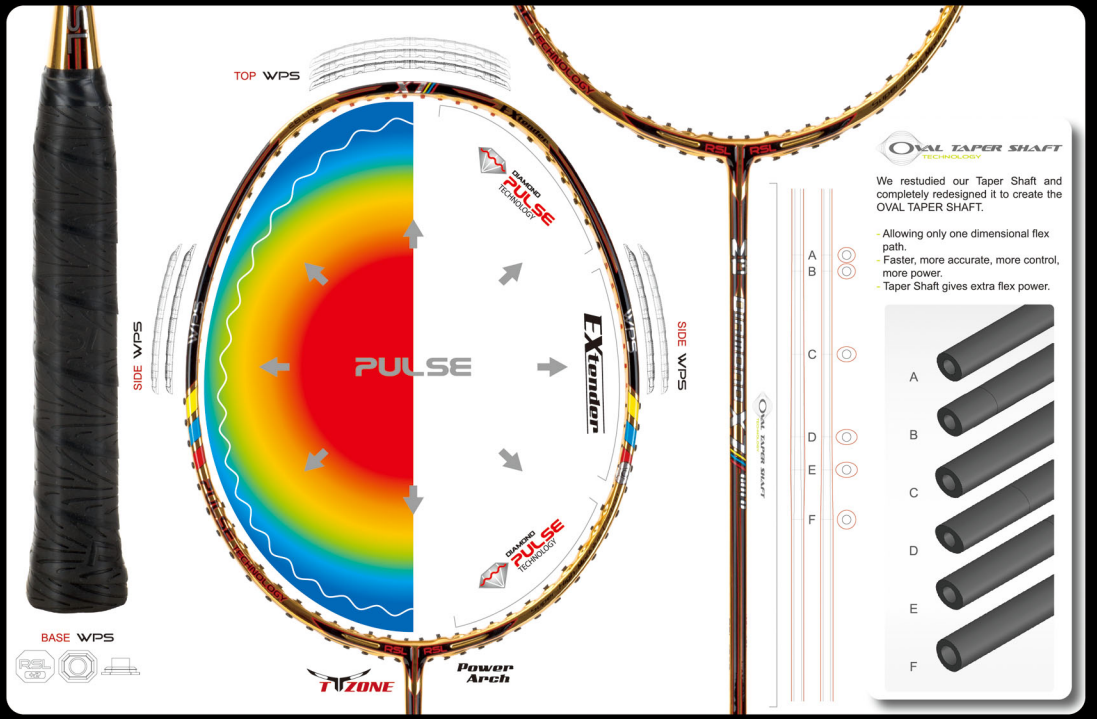

NEW

WPS

Weight Positioning System WPS

• WPS Top Plate, Side Plates, End Plate alters the racket's weight at different positions which changes the balance, the stability, the power, the control and the feel of the racket.

• WPS Diamond Plate are customised to fit only Diamond X7 Rackets
• WPS gives X7 48 different characteristics for you to choose from! Don't compromise, build your own!

OVAL TAPER SHAFT TECHNOLOGY

We restudied our Taper Shaft and completely redesigned it to create the OVAL TAPER SHAFT.

- Allowing only one dimensional flex path.
- Faster, more accurate, more control, more power.
- Taper Shaft gives extra flex power.

T-ZONE

T-Zone is an additional structural strength reinforcement design around the T-joint, it works to increase the feel, control and accuracy of your every shot. With the added stiffness from T-zone design, it allows you to sense and get more feedback from your every shot, making you more accurate and in control during return shots. Even when in off center hits, you can feel it and adjust accordingly during impact.

The new T-Zone technology works closely with "Anti Twist Technology" and "Super High Modulus Carbon" to give it that extra anti twist stiffness.

The extra torque control will help you better change of direction when playing cross court shots with much more accuracy.

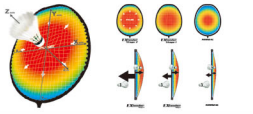

Super High Modulus carbon

- The highest grade of High Modulus Carbon currently available.
- Super strong.
- Applied only to shaft which increases its torque rigidity by 21%.
- Sharper, better control and more solid feel.
- Strategically placed will have maximum flex power and maximum twist reduction together at the same time.
- Better transfer of power from your hand to the shuttlecock.

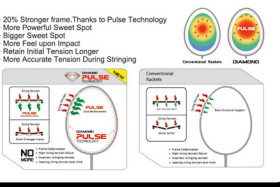

EXtender Stage 2

The EXtender Stage 2 was re-engineered from Stage1especially for Diamond X3 to work at its best with the Pulse Technology. The Pulse technology gives X2 one of the strongest head frame in the market, and with the new Extender Stage 2 design we manage to keep the strength of the frame but injecting much more power into what is already an incredible racket.

DIAMOND PULSE TECHNOLOGY

- 20% Stronger frame.Thanks to Pulse Technology
- More Powerful Sweet Spot
- Bigger Sweet Spot
- More Feel upon Impact
- Retain Initial Tension Longer
- More Accurate Tension During Stringing

WEIGHT POSITIONING SYSTEM

WPS

Weight Positioning System

WPS is a system that alters the racket's weight at different positions which changes the balance, the stability, the power, the control and the feel of the racket.

Rackets with WPS Technology

DIAMOND X7

3 Versions - Basic specs

Diamono X7	Shaft	Handle	Weight	Weight Variation
Gold	Super thin	Standard	83g (Original)	Min 82g - Max 89g
Silver	Oval Taper	Graphite	82g (Original)	Min 81g - Max 88g
Carbon	Oval Taper	Graphite	81g (Original)	Min 80g - Max 87g

EVOLUTION

3 Versions - Basic specs

Evolution	Shaft	Handle	Weight	Weight Variation
VR3	Super thin	Standard	83g (Original)	Min 82g – Max 89g
VR2	Taper	Standard	83g (Original)	Min 82g – Max 89g
VR1	Taper	Graphite	80g (Original)	Min 79g – Max 86g

Type of Usages

48 Rackets in 1
- There are 48 different combinations for each racket, there must be one that suits you perfectly.

A Racket Unique to You
- Build your own.

Save Cost
- A racket that stays suited to you for longer.

Grow with You
- As you grow as a player, your level or preference change. Now there is no need to buy a new racket. Diamond X7 and Evolution racket series will change with you.

Self Discovery
- Have fun with it, change the WPS around, see what type of racket characteristics suit you. You might be surprised to find a different style that suits you best.

Adjust, Adjust, Adjust
- Attack or defence style racket, it's your choice.
- Both String and Grip have weight, after stringing or adding new grip, characteristics of the racket change. WPS will re-balance the racket to the way YOU like it.

Effects

WPS Top Plate
(12 o'clock position)
- Increases Power (Biggest).
- Decreases in maneuverability.

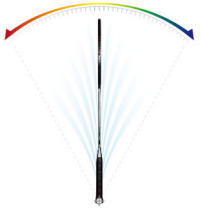

WPS Side Plates
(3 & 9 o'clock position)
- Increase Racket Face Stability.
- Small increase in Power.
- Small decrease in maneuverability.

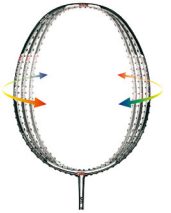

WPS End Plate
- Improves maneuverability when griping higher up the handle.
- Changes the feel of the racket.

Power (Swing Weight) (kg/cm2)

- Swing Weight (SW) is the best way to gauge the power of a racket.
- SW is a measurement of a racket's resistance to being rotated about the pivot point (where the racket is gripped).
- SW is dependent on several factors i.e. racket's weight, length, balance, head size.
- A high SW racket is more powerful than a low SW racket, but will be less maneuverable.
- SW can be increased by adding Side Plates and Top Plate with the Top Plate making a bigger difference.

Racket face Stability (Polar Moment of Inertia) (oz/in²)

- Polar Moment of Inertia (MOI): The property that determines how stable a racket is on off-center hits.
- Racket with a larger MOI will be more resistant to twisting on off-center hits, resulting in more accurate shots.
- MOI can be increased by adding Side Plates , which will also affect the racket's balance and SW.

Balance point (mm)

- Static measure of weight distribution in a racket is measured from the end of the handle.
- For the same Evolution racket, different WPS combination at either end of the racket will affect the balance and how the racket feels, head heavy or head light.

Tech Specs - 48 Rackets in 1

Power, Stability, Balance point

Every WPS combination has a different feel and a different performance. In the player's mind, the feel usually trumps the performance. So be adventurous and explore as many new WPS combinations as possible.

Effects of WPS

	Top Plate	Side Plate	End Plate
Swing Weight (Power)	x	x	
Polar Moment of Inertia (Stability)	x	x	
Balance Point (Feel)	x	x	x

What's in the Box

Safety Instructions

The safest way to secure the WPS weight adjustment plates is by stringing

We have packed so many technologies into our Diamond X5 racket, how can we add more!? In the X7 we manage to add 50 new features making this the most technologically advanced badminton racket in the world!

DIAMOND SERIES

DIAMOND

The most amount of racket technologies packed into 1 racket !

DIAMOND X5 GOLD

An advanced racket for advanced to professional players. This is a well balanced racket which allows the finest touch at the net and maximum power transfer from your body to the shuttlecock during hard hitting shots.

DIAMOND X5 Silver

Taper shaft for intermediate to advanced players. Taper shaft will enhance power and T-zone will give you the ultimate control that you need.

DIAMOND X5 White

This racket is built for Maximum power delivery but T-zone will still allow you to be in control.

What Makes RSL Rackets

No.1 in Quality

High Tech Manufacturing Process

Wrinkle Free

- RSL Wrinkle FREE Construction
  - = Less material for Super Strength
  - = Well balanced racket allow the strong material in shaft and handle
  - = Allow Quicker racket movement
- Other Brand Construction WITH Wrinkle
  - = Use more material for strength
  - = Heavy head, bad balance and sluggish play
  - = Heavy head means reducing material in shaft and handle to keep the light weight
- Wrinkles inside the High Modulus Graphite tubing occurs when High Modulus Graphite sheets are BENT into head shape
- Wrinkle causes bobbles which Weakens the construction

RSL with NO Wrinkle = Strong and Light Frame

Other Brand with Wrinkle causing bobbles = Weak Frame

Shaft & Head

- Unique Construction Method - Racket Shaft and Head Frame are constructed separately
- Reason: The Characteristics of Shaft and Head Frame are different = different construction process
- Head Frame - Strong for high tension
  Shaft - Must be Strong + Flexible + Anti Twisting + Powerful
- Gives - Better transfer of Power + Durable + Strong + Flex Power + Anti Twisting
- Ultra Thin 7mm shaft, only with HighTech construction

OVAL TAPER SHAFT TECHNOLOGY

We restudied our Taper Shaft and completely redesigned it to create the OVAL TAPER SHAFT.

- Allowing only one dimensional flex path.
- Faster, more accurate, more control, more power.
- Taper Shaft gives extra flex power.

WPS

Weight Positioning System Top Plate, Side Plates, End Plate alters the racket's weight at different positions which changes the balance, power, racket face stability, control and feel of the racket.

GRAPHITE HANDLE

A super strong light weight Handle construction with patent inner rib design.
(Patent number CN 200820131576.1)

Feather Light

Super low weight series with increassd its swing weight making it more powerful.

T ZONE

T-Zone is an additional structural strength reinforcement design around the T-joint, it works to increase the feel, control and accuracy of your every shot. With the added stiffness from T-zone design, it allows you to sense and get more feedback from your every shot, making you more accurate and in control during return shots. Even when in off centre hits, you can feel it and adjust accordingly during impact. The extra torque control will help you better change of direction when playing cross court shots with much more accuracy .

Super High Modulus carbon

The highest grade of High Modulus Carbon currently available.
Super strong.
Applied only to shaft which increases its torque rigidity by 21%
Sharper, better control and more solid feel.
Strategically placed so will still have maximum flex power and maximum twist reduction together at the same time.
Better transfer of power from your hands to the shuttlecock.

EXtender Stage 2

The EXtender Stage 2 was reengineered from Stage 1 especially for Diamond X3 to work at its best with the Pulse Technology. The Pulse technology gives X2 one of the strongest head frame in the market, and with the new Extender Stage 2 design we manage to keep the strength of the frame but injecting much more power into what is already an incredible racket.

EXtender Stage 1

Extender increases the Impact Zone by 11% both in X axis and Z axis. Improvement on the X axis widens the sweet spot, easier to hit at maximum power. Improvement on the Z axis enhances the string's characteristics, allowing more depth and produce more power with total control.

Flow Tech

Shuttlecocks can travel in excess of 300km/hr, imagine the racket speed it needs travel to generate this power?. Flow Tech is design to enhance the racket frame to glide through the air as fast as possible. It will also generate a small down force around the frame to act as a natural stabiliser at high speed without adding weight, very much like a spoiler on a sports car.

TAPER SHAFT TECHNOLOGY

8.5MM 7.5MM

The New Taper Shaft have a thinning shaft allowing higher Flex Point which results in more flex, more accurate, more power, more steeper smash,more forgiving and more feeling.

POLY-MATRIX CARBON

This is a new technology to combine different layers of Structural Carbon and High Modulus Carbon together. It results in 19% more strength to our high tension frame.This means better power transfer and more accurate during impact.

Anti Twist Technology

With the new Super High Modulus Multi - Layered Graphite, it is important to get the ingredient right.
Too much = Too Brittle.
Too little = too weak to transfer the power to impact.With the right amount on RSL shafts it will give Super Durability,Flex Power and Stop Shaft Twisting.

RSL's latest FLEX POWER

Flex Power is a Technology combining the characteristics of the Frame Design. Thin Flexible Shaft and matching it with the perfect Balance Point to give you Super power from a light weight frame.

SUPER STRONG HIGH TENSION FRAME

Super high Modulus Multi - Layered Graphite Constuction means High Tension Frame When stringing and able to sustain impact in double play.

Super Thin Shaft

With the Super High Modulus Multi - layered Graphite Construction, our Shafts can be thinner which means a reduction in weight and increase in flexibility but still with Superior Strength and Durability.

Repulsion

BADMINTON STRING

NEW

HTR

Prestressed Core Construction
- Unique premium thermo elastic resin process to impregnate and bond several hundreds of highly-oriented microfiber core. (thermo bonded jackets' bundles textured strands sheaths through resin impregnation)
- Prestressed construction and improved elasticity of the core gives HTR excellent repulsion and durability during medium to high tension loading.

Purpose built for high tension

Special outer coating treatment
- Designed for outstanding abrasive resistance.

Designed to work together with the new Prestressed Core to maximize repulsion power
- Increase lock will reduce slip and increase control.

Great Sound
- With the high tension and improved repulsion, it gives a crisp yet powerful sound.

Explorer 3.2

RB - 913

Colour : Green, Blue, Black
Size : 750 X 300 X 300 mm
After Extension : 750 X 300 X 390 mm

- Traditional Tour racket bag with new design features.
- 2 big compartments can carry up to 20 badminton rackets without cover. (Carrying less rackets is recommended for better racket protection)
- 2 main compartments each with the new EXTENDER design. When both EXTENDERS are expanded, the total volume will increase an amazing 50%.(a)
- Shoulder straps + hand held straps combine in one.(b)
- Shoes compartment with external access.(c)
- Total 4 side pockets to better organise all your personal tools and belongings.(d)
- Inner zipper pockets for valuables.(e)
- With the extra design features we managed to make the bag 25% lighter by simplifying the design in other areas.
- Stand along design - The Explorer 3 is designed to stand by itself without falling over. When you are waiting for a friend or travelling home on a bus, Explorer 3 can stand with you without toppling over and without having to bend down to pick it up.

ORGANIZATION

1. Extender.
2. 2 big compartments.
3. 4 side pockets.
4. Shoes compartment.
5. Shoulder + Hand held straps.

EXTENDER

2 main compartments each with the new EXTENDER design. When both EXTENDERS are expanded, the total volume will increase an amazing 50%.

Stand along design - The Explorer 3 is designed to stand by itself without falling over. When you are waiting for a friend or travelling home on a bus, Explorer 3 can stand with you without toppling over and without having to bend down to pick it up.

Explorer 2.2

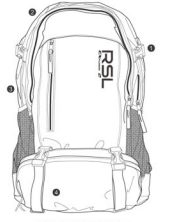

RB - 910

Colour : Black, Red
Size : 530 X 350 X 170 mm

- A multipurpose design not just for Badminton. E.g. holiday travels, travel to work, travel to the gym..... and much much more.
- 2 main compartments, our biggest Explorer 2 yet.(a)
- A detachable external bag – can carry used sweaty clothing on the outside or as an additional storage bag.(d)
- 1 externally accessible shoes compartment located at the bottom for better weight distribution.(e)
- 1 front pocket for quick access to your smaller personal belongings.(c)
- 2 external side pockets for quick and easy access.
- The extremely popular external padded racket compartment – holds up to 2-3 rackets completely separating your rackets from your badminton gear.(b)
- Strong padded back support –will not feel pressure of the racket against your back.
- 1 internal padded computer holder.
- Extra shoulder strap padding for extra comfort.
- Fully adjustable chest straps.
- Versatile design for Badminton Rackets, Tennis Rackets, Squash Rackets and any other sports activities.

ORGANIZATION

1. Detachable external bag.
2. External racket compartment.
3. 2 main compartments.
4. Shoes compartment.

EXPLORER SERIES

ORGANIZATION

1. Big capacity.
2. Internal padded compartment.
3. Zipper front compartment.
4. Quick accessible side pockets.

Explorer 1.1

RB-907

Colour : Grey , Sand , Black
Size : 540 X 600 X 230 mm

- Continuing the success of the first Explorer 1, we are proud to introduce a new concept design stepping away from tradition once again!
- 1 big compartment for big volume storage.
- 1 vertical zipper for easy access to the big main compartment.
- 2 quick accessible side pockets with 2 extra compartments.
- Single zipper front compartment.
- Internal padded computer holder.
- Multi-purpose and not just for badminton, eg holiday, hiking, other sports….
- Internal padded compartment can be used for Rackets or for Laptop computer.
- Keeping the tradition with the Explorer 1, this design completely conceals the racket.
- Big Capacity, perfect for badminton tour or holiday trips.
- Versatile design, ready for Badminton rackets, Tennis rackets, squash rackets and any other racket sports.
- Extra shoulder strap padding for extra comfort.
- Rackets are arranged in a flat side formation which reduces displacement giving it lower sideway profile and therefore more manoeuvrable.

Explorer 2.1

RB-908

Colour : Grey , Black , Sky blue
Size : 470 X 320 X 180 mm

- Easily accessible through a dual zipper arrangement.
- Functional multi-purpose bag with 1 large compartment suitable for clothing, books and folders.
- Externally accessible shoes compartment located at the bottom for better weight distribution and it is completely separate from the main compartment.
- When this compartment is not in use, the main compartment can extend down to make 1 big large compartment.
- Internal padded computer holder.
- 1 simple external zip compartment for quick access to your smaller personal belongings.
- Strong padded back support – isolating your back from the pressure of the racket.
- The extremely popular external racket compartment separating your racket from the main compartment to fully protect your racket.
- Versatile design, ready for Badminton rackets, Tennis rackets, squash rackets and any other racket sports.

ORGANIZATION

1. External zip compartment.
2. External racket compartment.
3. Dual zipper main compartment.
4. Shoes compartment.

Explorer 3.1

RB-909

Color : White , Red , Gold
Size : 740 X 290 X 260 mm

- Traditional Tour racket bag with new design features.
- Extra durable material at the bottom of Explorer 3.1 for extra protection.
- 2 big compartments.
- Maximum can carry up to 20 badminton rackets without covers.(Carry less rackets is recommended for better racket protection)
- Inner zipper pocket for valuables.
- Long handle straps on the outside, allowing the user to pick up the bag with the compartments unzipped.
- Versatile design, ready for Badminton rackets, Tennis rackets, squash rackets and any other racket sports.
- 2 big side pockets for easy access to your personal belongings.
- Stand alone design – The Explorer 3.1 is designed to stand by itself without falling over. When you are waiting for a friend or travelling home on a bus, Explorer can stand with you without toppling over and without bending down to pick it up.
- The padded backpack shoulder straps can be neatly hidden away.

ORGANIZATION

1. 2 Big compartments.
2. Big side pockets.

Explorer 1

RB-902

Colour : Black , Red
Size : 700 X 360 X 240 mm

- Excellent ergonomics to maximise usability and versatility.First design of its class, a backpack that completely covers and protects your RSL Rackets.
- Going to a game after work, a more discreet racket backpack design can give you the privacy you desire.
- Fully adjustable chest strap.
- Big capacity, perfect for badminton tour or long leisure holiday trips.(d)
- Total 6 side pockets for quick and easy access.(b)
- Rackets are arranged in a flat side formation, this reduces the displacement outwards and therefore more manoeuvrable in crowded places.(a)
- Externally accessible shoes compartment located at the bottom for better weight distribution.(c)
- Strong top handle.

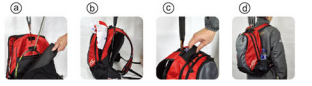

Explorer 2

RB-901

Colour : Black , Red , Orange , Gold
Size : 450 X 380 X 210 mm

- Excellent ergonomics to maximise usability and versatility.
- 2 main compartments and 1 external padded racket compartment - separates from your other badminton gear to completely protect 2-3 rackets.(b)
- Fully adjustable chest strap.
- Total 4 side pockets for quick and easy access.(d)
- Strong padded back support – will not feel pressure of the rackets against your back.(a)
- Externally accessible shoes compartment located at the bottom for better weight distribution.
- Strong top handle.(c)

Explorer 3 / 3 Tour

RB-903 , RB-904

Colour : Black , Red , White (Explorer 3)
Size : 740 X 290 X 260 mm
Size : 740 X 290 X 410 mm

- Traditional Tour racket bag with new design features.
- Stand alone design – The Explorer 3 is designed to stand by itself without falling over. When you are waiting for a friend or travelling home on a bus, Explorer can stand with you without toppling over and without bending down to pick it up.
- Extra durable material at the bottom of Explorer 3 for extra protection.
- The padded backpack shoulder straps can be neatly hidden away.
- 4 big side pockets for easy access to your personal belongings.
- 2 big compartments.
- 3 Big Compartments in the new Explorer 3 Tour.
- Explorer 3:Maximum can carry up to 20 badminton rackets without covers.
  Explorer 3 Tour:Maximum can carry up to 30 badminton rackets without covers. (Carry less rackets is recommended for better racket protection)
- Inner zipper pocket for valuables.
- Long handle strap on the outside, allowing the user to pick up the bag with the compartments unzipped.

RSL X Type Shoes

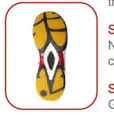

X Type

Positioning in the court and also the speed at which you are in position decides one wins or loses a game. In RSL, we understand the importance of speed and agility.

They say "Be at the right place at the right time", but with RSL X Type shoes we say "Be at ALL places AHEAD of time"

Strong Heel Brace
3 Dimensional support wraps perfectly around your heel to provide maximum support and protection.

Landing Force Cushion (LFC)
Upon landing, impact absorption cushion provides protection against impact injuries and to provide comfort without losing control.

Torsion Carbon Fibre Support Plate
A strong midsection will reduce tiredness and provide more support for the constant movement from front to back, heel to toe movement during game play. The new Carbon Fibre Support Plate supports the midsection with a functional shape that supports the front to back motion and also anti-twist movement.

Driving Force Cushion (DFC)
The driving force cushion is thinner and slightly denser than LFC to provide more solid base for push off, stopping action, change of direction. So the control is the key but comfort must also be considered.

Soft Supportive Sole
New soft and light weight sole provides a strong platform to combine all the other functions together. Flexibility provides it with mobility, the light weight construction maximise action speed and the strong platform provides support and control.

Super Suction Grip
Gives you maximum grip when you need it the most during stopping and defence.

Strategic Directional Grip
Directional Grip divides the sole into section and applies the right type of grip pattern to maximise grip to allowing you to have more confidence, push off quicker, change direction quicker and stop quicker.
